

Project Design Phase

Problem – Solution Fit Template

Date	22 July 2026
Team ID	
Project Name	Indian Agriculture Crop Production Analysis
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

1. CUSTOMER SEGMENT(S) CS <i>Who is your customer?</i> Small & marginal farmers, agricultural extension officers, state agriculture departments, and agri-input companies across India.	6. CUSTOMER CONSTRAINTS CC <i>What constraints prevent your customers from taking action or limit their choice of solutions?</i> Limited digital literacy, poor internet in rural areas, fragmented/unreliable historical crop data, and low willingness to pay for paid tools.	5. AVAILABLE SOLUTIONS AS <i>Which solutions are available to the customers today?</i> Manual record-keeping, generic weather apps, local Krishi Vigyan Kendra advice, and a few paid SaaS yield-prediction tools with limited India-specific data.
2. JOBS-TO-BE-DONE / PROBLEMS JP <i>Which jobs-to-be-done (or problems) do you address for your customers?</i> Predict crop yield/production, identify which crops perform best by region & season, and spot trends to plan sowing and resource allocation.	9. PROBLEM ROOT CAUSE RC <i>What is the real reason this problem exists?</i> Crop production data is scattered across government sources, not analyzed together, so farmers and planners lack a clear, data-driven view of yield trends.	7. BEHAVIOUR BE <i>What does your customer do to address the problem and get the job done?</i> Farmers rely on past experience and neighbours' advice; officials manually compile spreadsheets from multiple department reports each season.
3. TRIGGERS TR <i>What triggers customers to act?</i> Sowing season planning, sudden weather changes, falling yields, or government requests for production forecasts/reports.	10. YOUR SOLUTION SL <i>Describe your solution.</i> A data analysis platform that ingests historical crop production data (state/district/crop/year), analyzes trends, and visualizes yield, area & production patterns via interactive dashboards to support planning decisions.	8. CHANNELS of BEHAVIOUR CH <i>What kind of actions do customers take online/offline?</i> 8.1 Online: Govt open-data portals, agri mobile apps, WhatsApp farmer groups. 8.2 Offline: Krishi Vigyan Kendra visits, cooperative society meetings, local market boards.
4. EMOTIONS: BEFORE / AFTER EM <i>How do customers feel when they face a problem or a solution?</i> Before: uncertain and anxious about yield outcomes and planning. After: more confident and in control, with clear, data-backed insight into production trends.
