

Project Design Phase Solution Architecture

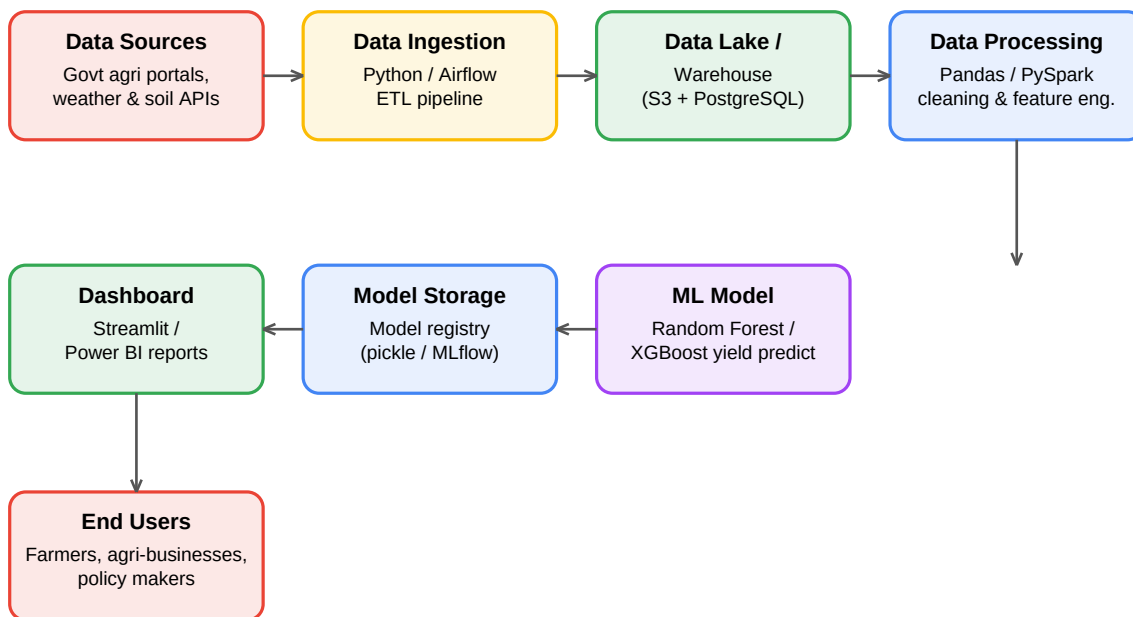

Date	22 July 2026
Team ID	
Project Name	Indian Agriculture Crop Production Analysis
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram – Crop Production Analysis:

Note: Crop yield/production datasets are ingested from public sources (e.g. data.gov.in, IMD), cleaned & merged, used to train prediction models, and results are visualized for stakeholders.
