

Project Performance Testing

Date	22 July 2026
Team ID	
Project Name	India's Agriculture Crop Production Analysis
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The crop production dataset was successfully uploaded and rendered in Tableau Public. All dataset fields, including State, District, Crop Year, Season, Crop, Area, Production, Yield, Rainfall, and Soil Type, were loaded correctly and made available for further analysis.
2.	Data Preprocessing	Removed null values, verified data types, created calculated fields, grouped Crop Year into decade bands, validated season and soil type fields before visualization.
3.	Utilization of Filters	Filters used: State, Season, Crop, and Crop Year filters. Aggregation functions: SUM(Production) was primarily used for total production mappings, and AVG(Yield) was applied to monitor ongoing baseline shifts. Worksheets utilize coordinated dynamic action filters to allow synchronized dashboard cross-filtering.
4.	Calculation fields Used	IN this Visualization (Total Production) Use Create Calculation field and other visualization normal calculation fields Use. Logic / Syntax: Mapped via custom integer parameters linked with rank/index functions (INDEX()) to dynamically filter states based on the selection. Purpose: Solves Tableau's order of operations conflict, allowing the dashboard to dynamically rank the top or bottom states within specific geographical region filters without breaking.

5. Dashboard design

All Visualization in use Dashboard Design (India's Agriculture Crop Production Analysis)

f.g.->Deshbord 1

TOTAL RECORDS	PRODUCTION (TONNES)	AVG YIELD
2,46,000	31,84,52,900	2.14

6. Story Design

India's Agriculture Crop Production Analysis using Tableau Story. Multiple stories are created into the Tableau story.
